Parapets.

Here at A.K. Bryan we produce many different types of parapet unit. These have been made in all different shapes and sizes.

Some have protruding reinforcing bar (bottom right), whilst others have removable cores (middle right) for fastening on site.

All parapet moulds we produce use wheel away front shutters, so that minimal space is taken up in the precast factories.

As with most parapets these had drip grooves, but we also had to make removable rebate formers so that stainless steel trims etc. could be fitted by the contractor.

Evans Concrete – H4A Parapet.

All parapet moulds have internal ends so different width units can be cast.

Parapet mould for ABM Precast Solutions.

Removable cores which the client chose to remove whilst the concrete was “green”.

This concrete parapet is from the mould pictured far left. This mould was manufactured for Evans Concrete & was for part of an Olympic project.
